

MIMOSA Environmental Policy – Dec 03, 2019

As an organization working to enable standards-based interoperability for applications and systems used in repeatable, scalable, and sustainable solutions for natural and built infrastructure asset management, MIMOSA cares about sustainability in our natural and built infrastructure.

MIMOSA is committed to minimizing our environmental impact. We aim to reduce waste, conserve energy, and use sustainable resources in our operations. We will promote eco-friendly practices in all activities and encourage our volunteers and partners to adopt similar principles.

While MIMOSA has no employees we work with our members, collaboration partners, and suppliers in various projects intended to have positive impacts on our environment. As we do this, we make maximum use of technologies to enable environmentally friendly virtual meetings and our OIIE OGI Piloting projects often demonstrate more efficient ways to model, monitor, and manage both natural and built infrastructure.
